GET /user/{username}

Get user by user name

- **Description:**
- **Produces:** ['application/json', 'application/xml']

Parameters

| Name | Position | Description | Type |
|----------|----------|---|--------|
| username | path | The name that needs to be fetched. Use user1 for testing. | string |

Responses

200 - successful operation

400 - Invalid username supplied

404 - User not found

PUT /user/{username}

Updated user

- **Description:** This can only be done by the logged in user.
- **Consumes:** ['application/json']
- **Produces:** ['application/json', 'application/xml']

Parameters

| Name | Position | Description | Type |
|----------|----------|------------------------------|--------|
| username | path | name that need to be updated | string |
| body | body | Updated user object | |

Responses

400 - Invalid user supplied

404 - User not found

DELETE /user/{username}

Delete user

- **Description:** This can only be done by the logged in user.
- **Produces:** ['application/json', 'application/xml']

Parameters

| Name | Position | Description | Type |
|----------|----------|-----------------------------------|--------|
| username | path | The name that needs to be deleted | string |

Responses

400 - Invalid username supplied

404 - User not found

GET /user/login

Logs user into the system

- **Description:**
- **Produces:** ['application/json', 'application/xml']

Parameters

| Name | Position | Description | Type |
|----------|----------|--------------------------------------|--------|
| username | query | The user name for login | string |
| password | query | The password for login in clear text | string |

Responses

200 - *successful operation*

400 - *Invalid username/password supplied*

GET /user/logout

Logs out current logged in user session

- **Description:**
- **Produces:** ['application/json', 'application/xml']

Parameters

| Name | Position | Description | Type |
|------|----------|-------------|------|
|------|----------|-------------|------|

Responses

default - *successful operation*

POST /user

Create user

- **Description:** This can only be done by the logged in user.
- **Consumes:** ['application/json']
- **Produces:** ['application/json', 'application/xml']

Parameters

| Name | Position | Description | Type |
|------|----------|---------------------|------|
| body | body | Created user object | |

Responses

default - *successful operation*

POST /user/createWithArray

Creates list of users with given input array

- **Description:**
- **Consumes:** ['application/json']
- **Produces:** ['application/json', 'application/xml']

Parameters

| Name | Position | Description | Type |
|------|----------|---------------------|------|
| body | body | List of user object | |

Responses

default - successful operation

POST /user/createWithList

Creates list of users with given input array

- **Description:**
- **Consumes:** ['application/json']
- **Produces:** ['application/json', 'application/xml']

Parameters

| Name | Position | Description | Type |
|------|----------|---------------------|------|
| body | body | List of user object | |

Responses

default - successful operation

EXAMPLE CODE

Perform the setup using the following commands

```
bash xyz.py -o <outputfile> -d <inputdir> -t <type>
```

3.1 Using API for xyz use case

3.2 Using API for mno use case
