PSDEMO RELEASE NOTES

Warning: This is a sample release note only for demonstration purposes.

Version 1.0

1.1 Introduction

This document is the release notes for the product PSDemo Release 9.1R2. This document contains information about what is included in this software release: supported features, feature changes, unsupported features, and known issues. If the information in the release notes differs from the information found in the documentation set, follow the release notes.

1.2 Hardware Platforms

You can install and use this software version on the following hardware platforms: • PSA300, PSA3000, PSA5000, PSA7000f, PSA7000c

To download software for these hardware platforms, go to: <https://support.pulsesecure.net/> Virtual Appliance Editions
This software version is available for the following virtual appliance editions: • Virtual Pulse Secure Appliance (PSA-V)

Note: From 9.1R1 release onwards, VA-DTE is not supported.

From 9.0R1 release, Pulse Secure has begun the End-of-Life (EOL) process for the VA-SPE virtual appliance. In its place, Pulse Secure has launched the new PSA-V series of virtual appliances designed for use in the data center or with cloud services such as Microsoft Azure and Amazon AWS.

The following table lists the virtual appliance systems qualified with this release.

1.2.1 Platform Qualified System

VMware

- HP ProLiant DL380 G5 with Intel(R) Xeon(R) CPU
- ESXi 6.7

- CentOS 6.6 with Kernel `cst-kvm 2.6.32-504.el6.x86_64`
- QEMU/KVM v1.4.0

Linux Server Release 6.4 on an Intel Xeon CPU L5640 @ 2.27GHz

- 24GB memory in host
- Allocation for virtual appliance (KVM, Hyper-V)
 - 4vCPU,
 - 4GB memory,
 - 40GB disk space
- Standard DS2 V2 (2 Core, 2 NICs)

PSDEMO GETTING STARTED GUIDE

- *Introduction*
- *Chapter 1*
- *Chapter 2*

2.1 Introduction

TBD

2.2 Chapter 1

TBD

2.3 Chapter 2

PSDEMO DEVELOPER'S GUIDE

TBD

- *Introduction*
- *API for some functionality*
 - *Pet Store APIs*
 - * *pet*
 - * *store*
 - * *user*
- *Example Code*
 - *Using API for xyz use case*
 - *Using API for mno use case*

3.1 Introduction

TBD

3.2 API for some functionality

TBD

3.2.1 Pet Store APIs

pet

GET /pet/{petId}

Find pet by ID

- **Description:** Returns a single pet

- **Produces:** ['application/json', 'application/xml']

Parameters

| Name | Position | Description | Type |
|-------|----------|---------------------|---------|
| petId | path | ID of pet to return | integer |

Responses

200 - *successful operation*

400 - *Invalid ID supplied*

404 - *Pet not found*

POST /pet/{petId}

Updates a pet in the store with form data

- **Description:**
- **Consumes:** ['application/x-www-form-urlencoded']
- **Produces:** ['application/json', 'application/xml']

Parameters

| Name | Position | Description | Type |
|--------|----------|------------------------------------|---------|
| petId | path | ID of pet that needs to be updated | integer |
| name | formData | Updated name of the pet | string |
| status | formData | Updated status of the pet | string |

Responses

405 - *Invalid input*

DELETE /pet/{petId}

Deletes a pet

- **Description:**
- **Produces:** ['application/json', 'application/xml']

Parameters

| Name | Position | Description | Type |
|---------|----------|------------------|---------|
| api_key | header | | string |
| petId | path | Pet id to delete | integer |

Responses

400 - *Invalid ID supplied*

404 - *Pet not found*

POST /pet/{petId}/uploadImage

uploads an image

- **Description:**
- **Consumes:** ['multipart/form-data']
- **Produces:** ['application/json']

Parameters

| Name | Position | Description | Type |
|--------------------|----------|-----------------------------------|---------|
| petId | path | ID of pet to update | integer |
| additionalMetadata | formData | Additional data to pass to server | string |
| file | formData | file to upload | file |

Responses

200 - successful operation

POST /pet

Add a new pet to the store

- **Description:**
- **Consumes:** ['application/json', 'application/xml']
- **Produces:** ['application/json', 'application/xml']

Parameters

| Name | Position | Description | Type |
|------|----------|--|------|
| body | body | Pet object that needs to be added to the store | |

Responses

405 - Invalid input

PUT /pet

Update an existing pet

- **Description:**
- **Consumes:** ['application/json', 'application/xml']
- **Produces:** ['application/json', 'application/xml']

Parameters

| Name | Position | Description | Type |
|------|----------|--|------|
| body | body | Pet object that needs to be added to the store | |

Responses

400 - Invalid ID supplied

404 - Pet not found

405 - Validation exception

GET /pet/findByStatus

Finds Pets by status

- **Description:** Multiple status values can be provided with comma separated strings
- **Produces:** ['application/json', 'application/xml']

Parameters

| Name | Position | Description | Type |
|--------|----------|---|-------|
| status | query | Status values that need to be considered for filter | array |

Responses

200 - successful operation

400 - Invalid status value

GET /pet/findByTags

Finds Pets by tags

- **Description:** Multiple tags can be provided with comma separated strings. Use tag1, tag2, tag3 for testing.
- **Produces:** ['application/json', 'application/xml']

Parameters

| Name | Position | Description | Type |
|------|----------|-------------------|-------|
| tags | query | Tags to filter by | array |

Responses

200 - successful operation

400 - Invalid tag value

store

GET /store/inventory

Returns pet inventories by status

- **Description:** Returns a map of status codes to quantities
- **Produces:** ['application/json']

Parameters

| Name | Position | Description | Type |
|------|----------|-------------|------|
|------|----------|-------------|------|

Responses

200 - *successful operation*

GET /store/order/{orderId}

Find purchase order by ID

- **Description:** For valid response try integer IDs with value ≥ 1 and ≤ 10 . Other values will generated exceptions
- **Produces:** ['application/json', 'application/xml']

Parameters

| Name | Position | Description | Type |
|---------|----------|------------------------------------|---------|
| orderId | path | ID of pet that needs to be fetched | integer |

Responses

200 - *successful operation*

400 - *Invalid ID supplied*

404 - *Order not found*

DELETE /store/order/{orderId}

Delete purchase order by ID

- **Description:** For valid response try integer IDs with positive integer value. Negative or non-integer values will generate API errors
- **Produces:** ['application/json', 'application/xml']

Parameters

| Name | Position | Description | Type |
|---------|----------|--|---------|
| orderId | path | ID of the order that needs to be deleted | integer |

Responses

400 - *Invalid ID supplied*

404 - *Order not found*

POST /store/order

Place an order for a pet

- **Description:**

- **Consumes:** ['application/json']
- **Produces:** ['application/json', 'application/xml']

Parameters

| Name | Position | Description | Type |
|------|----------|-------------------------------------|------|
| body | body | order placed for purchasing the pet | |

Responses

200 - *successful operation*

400 - *Invalid Order*

user

GET /user/{username}

Get user by user name

- **Description:**
- **Produces:** ['application/json', 'application/xml']

Parameters

| Name | Position | Description | Type |
|----------|----------|---|--------|
| username | path | The name that needs to be fetched. Use user1 for testing. | string |

Responses

200 - *successful operation*

400 - *Invalid username supplied*

404 - *User not found*

PUT /user/{username}

Updated user

- **Description:** This can only be done by the logged in user.
- **Consumes:** ['application/json']
- **Produces:** ['application/json', 'application/xml']

Parameters

| Name | Position | Description | Type |
|----------|----------|------------------------------|--------|
| username | path | name that need to be updated | string |
| body | body | Updated user object | |

Responses

400 - *Invalid user supplied*

404 - User not found

DELETE /user/{username}

Delete user

- **Description:** This can only be done by the logged in user.
- **Produces:** ['application/json', 'application/xml']

Parameters

| Name | Position | Description | Type |
|----------|----------|-----------------------------------|--------|
| username | path | The name that needs to be deleted | string |

Responses

400 - Invalid username supplied

404 - User not found

GET /user/login

Logs user into the system

- **Description:**
- **Produces:** ['application/json', 'application/xml']

Parameters

| Name | Position | Description | Type |
|----------|----------|--------------------------------------|--------|
| username | query | The user name for login | string |
| password | query | The password for login in clear text | string |

Responses

200 - successful operation

400 - Invalid username/password supplied

GET /user/logout

Logs out current logged in user session

- **Description:**
- **Produces:** ['application/json', 'application/xml']

Parameters

| Name | Position | Description | Type |
|------|----------|-------------|------|
|------|----------|-------------|------|

Responses

default - successful operation

POST /user

Create user

- **Description:** This can only be done by the logged in user.
- **Consumes:** ['application/json']
- **Produces:** ['application/json', 'application/xml']

Parameters

| Name | Position | Description | Type |
|------|----------|---------------------|------|
| body | body | Created user object | |

Responses

default - successful operation

POST /user/createWithArray

Creates list of users with given input array

- **Description:**
- **Consumes:** ['application/json']
- **Produces:** ['application/json', 'application/xml']

Parameters

| Name | Position | Description | Type |
|------|----------|---------------------|------|
| body | body | List of user object | |

Responses

default - successful operation

POST /user/createWithList

Creates list of users with given input array

- **Description:**
- **Consumes:** ['application/json']
- **Produces:** ['application/json', 'application/xml']

Parameters

| Name | Position | Description | Type |
|------|----------|---------------------|------|
| body | body | List of user object | |

Responses

default - successful operation

3.3 Example Code

Perform the setup using the following commands

```
bash xyz.py -o <outputfile> -d <inputdir> -t <type>
```

3.3.1 Using API for xyz use case

3.3.2 Using API for mno use case

PSDEMO USER GUIDE
