Place an order for a pet

- **Description:**
- **Consumes:** ['application/json']
- **Produces:** ['application/json', 'application/xml']

Parameters

Name	Position	Description	Type
body	body	order placed for purchasing the pet	

Responses

200 - successful operation

400 - Invalid Order

2.1.3 user

POST /user

Create user

- **Description:** This can only be done by the logged in user.
- **Consumes:** ['application/json']
- **Produces:** ['application/json', 'application/xml']

Parameters

Name	Position	Description	Type
body	body	Created user object	

Responses

default - successful operation

POST /user/createWithArray

Creates list of users with given input array

- **Description:**
- **Consumes:** ['application/json']
- **Produces:** ['application/json', 'application/xml']

Parameters

Name	Position	Description	Type
body	body	List of user object	

Responses

default - successful operation

POST /user/createWithList

Creates list of users with given input array

- **Description:**
- **Consumes:** ['application/json']
- **Produces:** ['application/json', 'application/xml']

Parameters

Name	Position	Description	Type
body	body	List of user object	

Responses

default - successful operation

GET /user/{username}

Get user by user name

- **Description:**
- **Produces:** ['application/json', 'application/xml']

Parameters

Name	Position	Description	Type
username	path	The name that needs to be fetched. Use user1 for testing.	string

Responses

200 - successful operation

400 - Invalid username supplied

404 - User not found

PUT /user/{username}

Updated user

- **Description:** This can only be done by the logged in user.
- **Consumes:** ['application/json']
- **Produces:** ['application/json', 'application/xml']

Parameters

Name	Position	Description	Type
username	path	name that need to be updated	string
body	body	Updated user object	

Responses

400 - Invalid user supplied

404 - User not found

DELETE /user/{username}

Delete user

- **Description:** This can only be done by the logged in user.
- **Produces:** ['application/json', 'application/xml']

Parameters

Name	Position	Description	Type
username	path	The name that needs to be deleted	string

Responses

400 - Invalid username supplied

404 - User not found

GET /user/login

Logs user into the system

- **Description:**
- **Produces:** ['application/json', 'application/xml']

Parameters

Name	Position	Description	Type
username	query	The user name for login	string
password	query	The password for login in clear text	string

Responses

200 - successful operation

400 - Invalid username/password supplied

GET /user/logout

Logs out current logged in user session

- **Description:**
- **Produces:** ['application/json', 'application/xml']

Parameters

Name	Position	Description	Type
------	----------	-------------	------

Responses

default - successful operation

EXAMPLE CODE

Perform the setup using the following commands

```
bash xyz.py -o <outputfile> -d <inputdir> -t <type>
```

3.1 Using API for xyz use case

3.2 Using API for mno use case
